

LED Strip Light for Telecommunications

This LED strip light is designed for illumination and visual signaling in telecommunications engineering. It features multiple colors such as green, blue, white, pink, and red.

Product Overview

Professional Telecommunications Lighting

These versatile LED strip lights are engineered for high-demand telecommunications environments. Designed to support multiple color modes including green, blue, white, pink, and red, the system provides reliable visual signaling and illumination solutions. The strips are suitable for diverse engineering applications, offering flexibility and consistent performance for technical equipment and cabinet management.

Technical Features

Primary Applications

- Telecommunications signaling
- Equipment rack illumination
- Status indicator lighting
- Engineering visual aids

Color Spectrum

Green, Blue, White, Pink, Red
