

Level Sensor Component

This component is a liquid level sensor designed for detecting fluid levels. It operates at 220V/50Hz with a maximum power of 1.5KW and is suitable for use in ambient temperatures from 0 to 80 degrees Celsius.

Product Overview

Level Sensor Component

This level sensor component is designed for reliable operation in industrial machinery environments. It features a robust construction suitable for general machinery applications, ensuring consistent performance. With its specific power and temperature ratings, it provides a dependable solution for level monitoring and control tasks.

Technical Specifications

Maximum Power

1.5 KW

Max Power

Rated Voltage

220 V

Frequency

50 Hz

Operational Conditions

Ambient Temperature Range

0 - 80°C

Application

Industry Category

Machinery, Industrial Parts, General Machinery
