

Light-Activated Sound Module with Recordable Audio

This light sensor sound module activates sound playback upon detecting changes in light levels. It supports custom recording, allowing users to upload personalized audio content and offers adjustable volume control.

Product Overview

Light-Activated Sound Module

The S-3029 is a versatile light-activated sound module designed for seamless integration into promotional items and interactive products. Featuring a recordable chip, this module allows for custom audio content, making it perfect for personalized greeting cards, postcards, and toys. Its compact design includes a 40mm plastic speaker and is powered by button cell batteries, ensuring easy application with the included adhesive sticker.
