

# Light-Sensitive Circular Sensor on Gold Substrate

This is a small electronic component. It is a circular and metallic sensor mounted on a rectangular, gold-colored substrate.

## Product Overview

### High-Precision Light Sensing Technology

This light-sensitive circular sensor features a specialized design mounted on a premium gold-plated substrate to ensure optimal electrical conductivity and durability. Designed for sensitive detection applications, its compact form factor allows for seamless integration into sophisticated electronic assemblies. The robust construction and metallic circular interface provide consistent performance in light-detection environments.

## Technical Specifications

### Component Category

Photodiode • Light-Sensitive

### Sensor Geometry

Circular

### Substrate Material

Gold

### Mounting Configuration

Square Pad, Substrate Mounted
