Product Overview

High-Efficiency Tee Grid Production

This roll forming machine is engineered for the automated production of light steel ceiling tee profiles, ideal for building decoration applications. The system features advanced roller technology to gradually shape metal strips into precise tee profiles, suitable for high-volume manufacturing environments. Designed for versatility, the machine supports the production of various C-shaped keel widths, including 75, 100, 150, 200, and 300 mm, ensuring tight and secure assembly for finished ceiling grids.

Technical Capabilities

Supported Keel Widths

- 75
- 100
- 150
- 200
- 300

Key Machine Features

Automatic Cutting System, Computer Control System, Precision Length Control, Robust Construction

Compliance & Quality

Certifications

CE • ISO • SGS • TÜV Rheinland • Bureau Veritas

Logistics & Service

Production Lead Time

30 days

Lead Time

Lifetime Technical Support

The machine includes comprehensive lifetime technical support. Non-artificial damage to parts is covered by a free replacement policy. On-site technical assistance is available for international clients, with the buyer responsible for travel, accommodation, and daily service fees.
