

Light Wave Furnace Control Board for 6-Lamp Furnaces

This control board is designed for light wave furnaces, specifically those using a 6-lamp configuration. It features temperature control, ensuring precise and efficient operation.

Overview

Universal Light Wave Furnace Controller

This universal control board is designed as a comprehensive repair and replacement solution for induction and light wave furnaces. Engineered for versatility, it supports 6-lamp configurations and features a Samsung micro-computerized controller for reliable operation. The board integrates multiple safety protections and smart cooking functions to ensure efficient and safe performance in professional or domestic heating applications.

Technical Specifications

Key Components

- Samsung micro-computerized controller
- High-quality special capacitor
- Original ST special switch module

Safety Features

Over-current protection, Over-heating protection, Incorrect placement protection, High-voltage protection, Low-voltage protection

Operational Features

Smart Cooking Menus

- Hot pot
- Cooking
- Porridge
- Water heating
- Steamed stew
- Soup

Smart Functions

Smart fire function • Adjustable temperature • Appointment timer • Wide voltage range support

Compliance

Certifications

ISO9001:2000, CE, RoHS
