

Lighting Bus Bar System

This lighting bus bar system is designed for efficient power distribution in lighting applications. Its modular design allows for flexible configurations and scalability to accommodate various lighting layouts.

Product Overview

Lighting Bus Bar System

This lighting bus bar system is engineered for efficient and reliable power distribution across diverse lighting applications. Featuring a modular design with high-conductivity aluminum alloy construction, it offers exceptional flexibility and scalability for commercial, industrial, and residential layouts. The system is built for long-lasting performance, providing corrosion resistance and robust installation security.

Technical Specifications

Quality Certification

Passed • <

Model Number	DZM-16
Material	Aluminum Alloy

Features & Benefits

Key Attributes

- High electrical conductivity
- Corrosion resistant construction
- Modular design for scalability
- Integrated connectors
- Secure mounting points

Applications

Suitable Environments	Commercial, Industrial, Residential
