

Line Interactive Uninterruptible Power Supply

This line interactive UPS provides backup power for electronic devices. It offers voltage regulation, surge protection and stable power during outages.

Product Overview

Reliable Power Protection

This line-interactive uninterruptible power supply (UPS) is engineered to provide essential backup power and voltage regulation for sensitive electronic equipment. Featuring a fully digitized microprocessor-controlled design, it ensures stable performance during power outages, voltage sags, and surges. With its compact form factor and intelligent battery management, it is an ideal solution for maintaining operational continuity in desktop or small office environments.

Core Features

Key Capabilities

- Line interactive design
- Fully digitized microprocessor controlled
- Boost and buck AVR
- Energy saving function with UPS green mode
- Compatible with generators

Protection & Safety

Protection Mechanisms

Lightening Protection, Surge Protection, Short Circuit Protection, Overload Protection

System Intelligence

Intelligent Functions

- Automatically charging in UPS off mode
- Automatically self-detection when startup
- Auto restart while AC recovery
- Intelligent battery management

Connectivity & Interface

Interface & Monitoring

- 3 LED indication for easy understanding
- RJ45
- USB (optional)

Technical Specifications

Technical Summary

Feature Category	Details
Technology	Line Interactive / SMD Technology
Control	Digital Microprocessor
Voltage Regulation	Boost and Buck AVR
