

Liquid and Gas Flow Meter

This meter is designed for measuring the flow of both liquids and gases. It provides accurate readings for process monitoring and control.

Product Overview

Precision Flow Measurement

This industrial flow meter is engineered for accurate monitoring of both liquid and gas media in complex processing environments. Designed for reliability in demanding conditions, it supports seamless integration into chemical and petrochemical piping networks. Its robust construction ensures consistent performance for critical separation and refining applications.

Technical Specifications

Primary Applications

- Chemical processing
- Petrochemical refining
- Distillation column monitoring
- Industrial piping networks

Supported Media

Liquid, Gas

Performance Metrics

Key Performance Metrics

1 Dual-Phase

Media Compatibility
