

Liquid and Gas Meter

This meter is designed for measuring the flow of both liquids and gases. It is suitable for industrial applications requiring precise measurement and monitoring.

Product Overview

Industrial Flow Control Solution

This industrial control panel is engineered for the precise monitoring and management of liquid and gas flow systems. It features a robust, gray metal cabinet design with dual-door access, ensuring durability in demanding industrial environments. The internal architecture is meticulously organized with high-quality wiring and electrical components, providing a reliable interface for complex flow control applications.

Technical Specifications

Internal Complexity

High-density wiring • Relay-integrated • Terminal block connectivity

Housing Construction

Gray metal cabinet with dual-door access

Primary Application

Liquid Flow Control, Gas Flow Monitoring, Industrial Automation
