

Liquid Asphalt Distillation Tester

The liquid asphalt distillation tester determines distillate content in liquid petroleum asphalt. It accurately ascertains the boiling range characteristics of asphalt.

Product Overview

Precision Asphalt Analysis

The Liquid Asphalt Distillation Tester is a specialized laboratory instrument engineered for conducting distillation tests on liquid asphalt. It accurately determines the boiling range characteristics of asphalt materials, providing essential data for quality control and research applications. Designed with durable materials and a precise heating unit, the apparatus ensures reliable separation of asphalt components for consistent, repeatable results.

Technical Specifications

Model Number	DSHD-255A
Primary Application	Liquid Asphalt, Distillation Testing, Quality Control, Laboratory Research

Key Components

Included Components

- Heating unit with precise temperature control
- Distillation flask
- Condenser
- Receiving cylinder

Construction

Durable Materials • Laboratory Grade
