

Livestock Feed Pellet Production Unit, 1-2 TPH

This livestock feed pellet production unit processes mixed feed into pellets. It features a 1-2 tons per hour capacity and integrates mixing, conveying, and pelletizing.

Product Overview

Compact Livestock Feed Solution

This integrated production unit is specifically designed for small-scale farms looking to streamline their livestock feed production. The system features a comprehensive setup including a mixing tank, conveying system, and efficient pelletizing machinery, all mounted on a sturdy steel frame. It offers a reliable, all-in-one solution that is easy to set up and operate while maintaining consistent output quality.
