Overview

Comprehensive LNG Infrastructure Solutions

This service provides full-scale engineering and construction solutions for Liquefied Natural Gas (LNG) infrastructure. The scope covers the development of complex facilities including LNG plants, terminals, and gasification stations. Designed for both onshore and offshore applications, these projects ensure efficient liquefaction, storage, and transfer capabilities for natural gas operations.

Infrastructure Services

Construction Services Offered

- LNG Plant Construction
- PLNG Construction
- LNG Terminal Construction
- LNG Filling Station Construction
- LNG Gasification Station Construction

Facility Types

Offshore, Onshore, Floating Storage, Processing Units
