

Local Area Network Communication Cable

This communication cable is designed for local network applications. It is manufactured under GB/T13849.1 5-1993 standard.

Overview

High-Density Network Connectivity

This high-density communication cable is specifically engineered for reliable local network applications. Featuring a robust multi-conductor design, it ensures efficient data transmission while maintaining signal integrity. The durable outer jacket provides essential protection against environmental factors and physical stress, making it a versatile solution for both indoor and outdoor installations.

Technical Specifications

Key Construction Features

- High-density conductor arrangement
- Durable protective outer jacket
- Optimized internal signal interference reduction

Performance Focus

Signal Integrity • Data Transmission Efficiency • Physical Durability

Installation Environment

Indoor, Outdoor
