

# Lockable Brass Ball Valve for Fluid Control

This lockable brass ball valve is designed for industrial and general machinery applications. It features a robust brass construction for durability and corrosion resistance, providing enhanced security and control over fluid flow.

## Product Overview

### Industrial Fluid Control Solution

This lockable brass ball valve is engineered for demanding industrial and general machinery applications, offering a reliable solution for fluid flow management. Constructed from high-quality brass, it ensures long-lasting durability and superior corrosion resistance in diverse operating environments. The integrated locking mechanism provides enhanced security, allowing operators to prevent unauthorized access or accidental adjustments to the flow system.

## Technical Specifications

### Security Features

Lockable Mechanism • Tamper-Resistant

### Key Durability Traits

- Corrosion resistant construction
- Robust brass body
- Reliable flow control

<b>Material</b>	Brass
<b>Primary Application</b>	Industrial Machinery, Fluid Control Systems, General Industrial
