

Low Barycenter B Series Caster

The Low Barycenter B Series Caster is engineered for stability and maneuverability in demanding applications. The wheel is constructed from high-quality polyurethane, providing excellent floor protection and smooth rolling performance.

Overview

Low Barycenter B Series Caster

The Low Barycenter B Series Caster is engineered for stability and maneuverability in demanding applications. Featuring a robust steel frame finished with a durable black coating, this caster is designed to withstand heavy loads and resist corrosion. It is ideal for use in material handling equipment, carts, and industrial machinery where a low center of gravity is crucial for operational stability.

Construction & Materials

Frame Material	Steel
Frame Finish	Black coating
Wheel Material	High-quality polyurethane

Performance Features

Best For

- Material handling equipment
- Industrial carts
- Industrial machinery

Rotation Mechanism	Precision bearing system
Key Benefits	Floor Protection, Corrosion Resistant, Low Center of Gravity, Heavy Load Capacity
