

Low Cavity Injection Mold

This low cavity injection mold is designed for precision manufacturing. Its robust construction and optimized cooling ensure consistent part quality for complex geometries.

Product Overview

Precision Injection Molding Solutions

This low cavity injection mold is engineered for high-volume manufacturing, offering robust steel construction and optimized cooling channels for superior thermal management. Designed to produce complex geometries with tight tolerances, it features precise alignment mechanisms to ensure consistent part quality. It serves as a reliable solution for demanding industrial applications requiring high-precision components.

Certifications & Standards

Quality Certifications

ISO 9001:2008

Technical Capabilities

Primary Applications

- Automobile parts
- Semiconductor components
- IC connectors
- Lead frame electrical connections
- Motor fixed rotors
- Precision mold spare parts

Key Design Features

- Low cavity design
- Optimized cooling channels
- Robust steel construction
- Precise alignment mechanisms

Service & Quality

Management Systems

ERP System Implemented • Standardized Process Management • Laboratory & Testing Center
