

Low-Floor LPG City Bus

This large passenger bus is designed for urban transportation needs. Its LPG engine contributes to reduced emissions, while the low-floor design ensures easy access for all passengers.

Overview

Low-Floor LPG City Bus

This large passenger bus is engineered specifically for efficient urban transportation. Its low-floor design facilitates rapid passenger boarding and alighting, while the LPG-powered engine offers a cleaner alternative for city transit. With a robust chassis and modern safety systems, this vehicle combines durability with passenger comfort for high-traffic environments.

Technical Specifications

Fuel Type	LPG
Design	Low-floor
Primary Application	Urban transportation

Features

Safety & Comfort

- Modern braking systems
- Advanced suspension technology
- Multiple door configuration for efficient flow

Key Features

Low-floor boarding, LPG engine, Robust chassis, Spacious interior, Enhanced visibility
