

# Low Noise AC Induction Motor for Injection Molding

This AC induction motor is engineered for plastic injection molding machines. It delivers reliable performance with low noise, making it suitable for industrial use.

## Product Overview

### Industrial Efficiency for Injection Molding

The Series YSJ three-phase AC induction asynchronous motor is engineered specifically to meet the high-demand requirements of plastic injection molding machinery. It provides a robust, energy-efficient, and quiet solution that enhances production reliability while minimizing industrial noise levels. The motor conforms to international IEC standards for power levels and dimensions, ensuring seamless integration and maintenance.

## Technical Specifications

Motor Type	Three-phase AC induction asynchronous motor
Standards Compliance	IEC Standard

## Key Features

### Operational Highlights

- High efficiency and energy-saving design
- High starting torque
- Low noise operation
- Low vibration levels
- Reliable industrial operation

Primary Application	Plastic injection molding machines
