

LPG Gas Regulator Valve

This gas valve is designed for regulating gas flow and monitoring output pressure. It incorporates a safety mechanism to prevent overpressure and maintain a consistent gas supply.

Overview

Precision LPG Regulation

This series of LPG gas regulator valves is engineered for reliable and safe flow control in both industrial and residential applications. Constructed from durable, corrosion-resistant materials, these valves ensure longevity and consistent performance. They feature robust housing and precise adjustment mechanisms, making them suitable for heating systems, appliances, and various industrial gas processes.

Model Variants

Available Models

- JYT-0.6AF
- JYT-0.6AB
- JYT-0.6DM-10
- JYT-0.6A-LPG
- JYT-0.6DM-06

Technical Specifications

Application Suitability

Industrial • Residential • Heating Systems • Appliance Integration

Key Features

Corrosion Resistant, Overpressure Safety, Precision Adjustment, Standard Fittings
