

LPG Single-Fuel Air-Conditioned City Bus

This city bus is a single-fuel LPG air-conditioned vehicle. It uses single-fuel liquefied petroleum gas and is equipped with an excellent LPG engine for complete and clean combustion.

Overview

GZ6112SV Series City Bus

The GZ6112SV series is a mature, single-fuel LPG air-conditioned city bus designed for efficiency and environmental performance. It utilizes a high-quality LPG engine that ensures cleaner and more complete combustion compared to traditional fuels. The design integrates modern styling with safety-focused features, including protective railings for the gas cylinder, making it a reliable solution for urban transit needs.

Technical Specifications

Fuel Type	Single-fuel Liquefied Petroleum Gas (LPG)
Model Series	GZ6112SV

Safety & Design

Safety Features	Protective Gas Cylinder Railings, Air-Conditioned
Design Philosophy	Modern urban styling adapted from international standards for market-ready performance.
