

Macerating Toilet Pump System

This macerating toilet pump system is designed for locations where gravity drainage isn't feasible. The system integrates a toilet with a macerator pump, grinding solid waste for pumping through narrow pipes to the sewer line.

Product Overview

Innovative Macerating Solution

This macerating toilet pump system is a specialized plumbing fixture engineered for environments where traditional gravity-fed drainage is impractical. By grinding solid waste into a slurry, the system allows for efficient transport through narrow-diameter piping to main sewer lines or septic tanks. It offers a reliable, compact, and flexible installation solution perfect for basement bathrooms, home additions, or challenging plumbing layouts.

Technical Specifications

Bowl Material	Vitreous China
Power Requirements	Standard Electrical Outlet
Installation Suitability	Basements, Home Additions, Challenging Plumbing Layouts, Non-Gravity Drainage

Key Features

Operational Highlights

- Compact design for space efficiency
- Quiet operation
- Easy installation process
- Grinds waste for small-diameter pipe compatibility

Compliance & Standards

Compliance

Meets Plumbing Codes
