

Machine Tool Equipment

Machine tool equipment is used for shaping or machining metal or other rigid materials. They are essential for manufacturing components with precision and accuracy.

Product Overview

Professional Machine Tool Equipment

This high-performance machine tool equipment is engineered for precision, reliability, and efficiency in demanding industrial environments. Designed to meet the rigorous standards of modern manufacturing, it offers robust construction and advanced operational capabilities. Ideal for professional workshops and large-scale production facilities, this equipment helps streamline workflows and ensures consistent output quality.

Operational Metrics

Power Rating

5.5 kW

Motor Power

400 V

Operating Voltage

Compliance & Certifications

CE, ISO 9001, RoHS

Technical Specifications

Core Specifications

Feature	Specification
Control System	CNC Integrated
Cooling Method	Liquid Cooled
Material Compatibility	Steel, Aluminum, Alloys
