

Machined Metal Valve Component

This machined metal component is designed for use in valve systems. It features a cylindrical base and a rounded, polished top section with a central bore.

Product Overview

Precision Machined Valve Component

This high-quality machined metal component is engineered for demanding industrial environments. Featuring a robust cylindrical base and a polished, precision-bored top section, it is crafted from corrosion-resistant alloy, making it ideal for use in complex manufacturing and processing machinery. Its smooth, reflective finish ensures optimal performance as a connector, guide, or sealing element within larger mechanical systems.

Technical Specifications

Material Type	Stainless Steel / Corrosion-Resistant Alloy
Surface Finish	Polished / Smooth
Key Features	Cylindrical Base, Central Bore, Corrosion Resistant, Precision Machined

Application

Typical Applications

- Manufacturing Machinery
- Processing Equipment
- Connector Element
- Mechanical Guide
- Sealing Component
