

Machinery Filter Cartridge with Sodium Polyphosphate

This filter cartridge is made with sodium polyphosphate. It is designed to remove impurities and contaminants from fluids in general machinery applications.

Product Overview

Machinery Filter Cartridge with Sodium Polyphosphate

The KCSP-10 is a specialized filter cartridge engineered for general machinery applications. Designed to maintain fluid integrity, it effectively removes impurities and contaminants to support optimal machine performance and longevity. Constructed with durable materials, this cartridge is capable of withstanding demanding industrial environments including high-pressure and high-temperature conditions.

Technical Specifications

Model Number	KCSP-10
Filtration Material	Sodium Polyphosphate
Application	General Machinery, Industrial Fluid Filtration
