

Machinery Frame Component

This frame component is designed for use in plastic and rubber machinery. It is made from a durable composite or treated wood material, featuring a rectangular cutout to hold or support other components.

Product Overview

Industrial Machinery Frame Component

This durable frame component is engineered for integration into plastic or rubber processing machinery. Featuring a robust construction with a distinct rectangular cutout, it is designed to securely house or support critical internal components. Its design prioritizes structural integrity and industrial functionality, making it a reliable choice for heavy-duty manufacturing environments.

Manufacturing Details

Country of Origin	Taiwan
-------------------	--------

Design Specifications

Construction Material

Composite • Treated Wood

Primary Application	Plastic Machinery, Rubber Machinery, Industrial Support
