

Machinery Moving Skates with Rotating Top Plate

These heavy-duty machinery skates are designed for moving and positioning heavy equipment. They feature a rotating top plate that allows for easy steering and maneuverability.

Overview

Professional Machinery Moving Skates

These industrial machinery skates, also known as roller skids, are designed to streamline the movement of heavy equipment. Featuring a rotating top plate, they allow for precise 360-degree maneuvering, significantly improving efficiency in warehouse and manufacturing environments. Engineered for durability, these skates provide a stable, reliable solution for transporting heavy loads with minimal floor impact.

Technical Specifications

Compatible Equipment Types

- Three-point moving skates
- Steel chain roller skates
- Rotating moving dollies
- Veered moving skates

Model Identifier	F400
Movement Capability	360-degree rotation, Rotating top plate, Steerable

Performance

Operational Benefits

Non-floor damaging • Improved efficiency • Heavy-duty construction • Precision positioning
