

Machinery Skates for Heavy Equipment

These machinery skates are designed for moving heavy loads and equipment. They feature a durable, low-profile construction and multiple rollers for smooth and efficient movement.

Product Overview

Heavy-Duty Machinery Skates

These machinery skates are specialized tools designed for the safe and efficient relocation of heavy equipment in industrial environments. Featuring a durable, low-profile construction, they allow for easy positioning under loads. Equipped with multiple rollers, these skates ensure smooth movement and stability, making them an essential solution for professional machinery handling and positioning tasks.

Technical Features

Design Highlights

Low Profile • Durable Construction • Multi-Roller System

Primary Application

Industrial Machinery Moving, Heavy Equipment Handling, Load Positioning

Handling Capability

Designed for heavy loads and industrial equipment relocation
