

Magnetic Starter for Motor Control

This magnetic starter is an electronic component engineered for motor control applications. It provides reliable protection for electric motors, ensuring efficient and safe operation with push-button controls.

Product Overview

Industrial Motor Control

The Q7 series magnetic starter is designed for reliable motor control in industrial and commercial environments. It provides a safe, efficient solution for remote switching and frequent motor starts, featuring a compact and lightweight design for easy installation. Built to meet rigorous industry standards, this starter ensures longevity and consistent performance for various motor-driven applications.

Technical Specifications

Industry Standards

IEC947-4-1

Design Advantages

- Compact volume
- Lightweight construction
- Reliable motor protection
- Robust enclosure
- Intuitive push-button interface
