

Maize Flour Production Line

This maize flour production line is designed for efficient and high-quality maize processing. The system is engineered for optimal throughput, minimal energy consumption, and consistent flour quality.

ADDITIONAL IMAGES

Overview

Professional Maize Milling Solution

This advanced maize flour production line is engineered to meet modern market demands for high-efficiency, energy-saving grain processing. Incorporating global production trends, the system utilizes high-quality imported milling heads and a precision roller-chain transmission system. With micro-digital control and integrated instrumentation, it offers consistent, large-scale production capabilities for various corn-based products.

Performance

Output Fineness

40 mesh

Minimum Mesh

120 mesh

Maximum Mesh

Output Varieties

Superfine Cornmeal, Corn Grits, Cornmeal

Technical Features

Core Components

- Input hoppers
- Cleaning and conditioning equipment
- Roller mills
- Sifters and separators
- Purifiers
- Packaging systems

Control Interface

Micro digital control with instrument display

Transmission System

Roller and chain transmission
