

Manual Agricultural Plow with Depth Control

This manual agricultural implement is designed for soil preparation and cultivation. The implement includes a plow blade for breaking and turning the soil, along with an adjustable depth control mechanism and a wheel to assist with depth maintenance.

Product Overview

Manual Agricultural Plow with Depth Control

This manual agricultural implement is engineered for efficient soil preparation and cultivation tasks. Featuring a robust frame and a long handle, it provides the leverage needed for manual operation in various soil conditions. The inclusion of an adjustable depth control mechanism and a support wheel ensures consistent performance and improved maneuverability for the operator.

Technical Specifications

Model Number	L-20C
Operation Type	Manual

Key Features

Primary Application	Soil Preparation • Cultivation
Key Features	Adjustable Depth Control, Soil Turning Blade, Support Wheel, Durable Construction
