

Manual Brake Lever Assembly

This hand brake lever assembly is a robust mechanical component designed for reliable braking force application. Constructed from durable metal, it features a lever arm with a hooked end for engaging the braking mechanism.

Product Overview

Manual Brake Lever Assembly

This manual brake lever assembly is a robust mechanical component engineered for reliable and consistent braking force application. Constructed from durable metal, the assembly features a precision-engineered lever arm with a hooked end designed for seamless engagement with braking mechanisms. It incorporates high-quality pivot points to ensure smooth operation and precise control, making it an ideal choice for diverse industrial and automotive applications.

Technical Specifications

Material	Durable Metal
Operation Type	Manual
Key Features	Hooked Lever Arm, Pivot Point Design, High Durability

Applications

Suitable Applications

- Industrial Machinery
- Automotive Systems
- Mechanical Braking Mechanisms
