

Manual Chain Hoist

This chain block is a portable lifting device easily operated by hand. It is suitable for use in factories, mines, construction sites, docks, and warehouses for the installation of machines, lifting goods, and loading and unloading.

Product Overview

Versatile Manual Lifting Solution

This manual chain hoist is a portable, high-efficiency lifting device designed for manual operation. It is an ideal solution for factories, mines, construction sites, docks, and warehouses, specifically where electric power is unavailable. The robust design ensures reliable performance for machine installation, cargo lifting, and general loading tasks in both indoor and outdoor environments.

Key Features

Operational Advantages

- Portable and lightweight design
- Manual hand-operated mechanism
- Suitable for open-air environments
- No external power supply required

Applications

Common Applications

Manufacturing, Mining, Construction, Logistics, Warehousing
