

# Manual Chain Hoist

This manual chain hoist is a portable lifting device operated by a hand chain. It is suitable for equipment installation and loading/unloading goods in factories, mines, construction sites, and warehouses.

## Product Overview

### HS Series Manual Chain Hoist

The HS series chain block is a portable, manually operated lifting device designed for reliability and ease of use. It is ideal for applications where electric power is unavailable, making it perfect for use in factories, mines, construction sites, and warehouses. Engineered for durability and high efficiency, this hoist features a robust design that minimizes the hand-pull effort required for lifting heavy loads.

Model Number

HSZ

## Key Features

### Core Advantages

- Safety in operation and easy maintenance
- High efficiency with small hand-pull requirement
- Lightweight design for easy handling
- Compact size with fine appearance
- High durability in demanding environments

### Certifications

TUV • CE

## Operational Details

### System Compatibility

- Monorail overhead conveying systems
- Hand travelling cranes
- Jib cranes
- Trolley-mounted configurations

Suitable Environments

Factories, Mines, Farms, Construction Sites, Wharves, Docks, Warehouses
