

Manual Hydraulic Pump for Cranes

This elevator is designed for agricultural construction machinery, specifically cranes. It appears to be a manually operated pump mechanism, possibly for hydraulic systems within the crane.

Product Overview

Manual Hydraulic Pump for Cranes

This manual hydraulic pump is specifically engineered for use in agricultural construction machinery, particularly cranes. Designed for reliability in demanding environments, the unit features a robust vertical cylindrical body with an integrated manual operation handle. With its durable black coating and precise mounting flange, this component provides a dependable solution for manual hydraulic system activation.

Technical Specifications

Surface Finish

Black Coating

Design Features

- Vertical cylindrical body
- Integrated manual handle
- Mounting flange included

Primary Application

Agricultural Construction Machinery / Cranes

Operation

Manual
