

Manual Metal Forming Machine

This manually operated machine tool is designed for metalworking. It features adjustable carriages and a rotating headstock for shaping or forming metal workpieces.

Overview

Manual Metal Forming Machine

This manual metal forming machine is a versatile, manually operated tool designed for precise metalworking tasks. Featuring a robust construction with a durable painted finish, it is equipped with a horizontal bed, adjustable carriages, and a rotating headstock for flexible workpiece manipulation. Ideal for small-scale fabrication and detailed metal shaping, this machine provides the control necessary for creating intricate designs, such as decorative twisted patterns.
