

Manual Pallet Jack 5500 lbs Capacity

This pallet jack is a manually operated hydraulic jack used to lift and move pallets. The hydraulic system provides efficient lifting power, allowing for safe and efficient material handling in warehouses, factories, and other industrial settings.

Overview

Heavy-Duty Material Handling

This manual hydraulic pallet jack is engineered for reliable performance in demanding industrial environments such as warehouses and factories. Featuring a robust steel frame and an ergonomic handle, it ensures safe and efficient transport of heavy palletized loads. The high-capacity hydraulic system provides smooth, precise lifting power for daily material handling operations.

Performance Metrics

Load Capacity

5500 lbs

Capacity

Dimensions

Fork Dimensions

Specification	Value	Unit
Fork Width	27	inches
Lowered Height	3	inches
Raised Height	7.5	inches

Features

Key Features

- Robust steel frame construction
- Smooth-rolling wheels
- Ergonomic handle design
- Efficient hydraulic lifting system

Applications

Typical Applications

Warehousing, Manufacturing, Industrial Logistics, Material Handling
