

Manual Sheet Metal Rotary Forming Machine

Manually operated rotary machine designed for various metalworking tasks. Equipped with adjustable rollers for shaping and forming sheet metal, it is ideal for creating bends, seams, and edges in metal fabrication projects.

Product Overview

Professional Metal Forming Solution

This manual rotary forming machine is a versatile tool engineered for precise metalworking tasks, including creating bends, seams, and custom edges. Featuring a robust, durable construction and a manual hand crank, it offers excellent control for detailed fabrication projects. Designed for efficiency and stability, the machine is easily clamp-mounted to any standard workbench, making it an essential addition to any metal fabrication shop.

Technical Specifications

Operation	Manual
Mounting	Clamp-mounted
Capabilities	Sheet Metal Forming, Bending, Seaming, Edging

Design and Build

Build

Robust Construction • Precision Hand Crank • Adjustable Rollers
