

Manually Operated Ball Valve

This ball valve is equipped with a red butterfly handle for manual operation. It is made from brass and features threaded ends for secure connection to plumbing systems, controlling the flow of liquids or gases.

Product Overview

Professional Manual Ball Valve

This manually operated ball valve is engineered for reliable flow control in both industrial and residential plumbing systems. Featuring a durable metallic alloy body and a high-visibility red butterfly handle, it ensures secure shut-off and easy operation. The threaded ends allow for quick and secure installation into existing pipe networks.
