

# Manure Fertilizer Spreader for Pasture and Farmland

The manure fertilizer spreader is designed for spreading fertilizers before ploughing and seeding, as well as for pasture application. It is suitable for large farms and grasslands, spreading organic fertilizer, animal manure, and other materials.

## ADDITIONAL IMAGES

## Overview

### Professional Manure Management Solution

This versatile manure fertilizer spreader is engineered for high-efficiency nutrient application across large farms, pastures, and grasslands. Designed to handle a variety of materials including organic fertilizer, animal manure, distiller's grains, and even road salt for snow removal, it offers a multi-purpose solution for agricultural and maintenance operations. Featuring a robust construction with a high-speed vertical mixer and hydraulic control systems, this machine ensures consistent, adjustable spreading performance.

## Performance Metrics

The spreading mechanism features an adjustable discharge system for controlled application rates.

Spreading Width	14 m
Capacity Range	6-24 cbm

## Technical Specifications

Durable tank design suitable for various farm sizes and diverse field conditions.

### Key Components

- Double vertical high-speed mixer
- Solid polyethylene box
- Propeller system
- Hydraulic control system

### Operational Compatibility

Tractor-trailed, Adjustable spreading width, Controllable discharge speed

## Applications

### Primary Applications

Large farms • Pasture management • Road snow removal • Organic fertilizer application
