

# Marine Alternator 10-2000 KVA

Marine alternators provide reliable power generation for marine environments. Available in a power range of 10 to 2000 KVA, this alternator is engineered for durability and efficient performance.

## ADDITIONAL IMAGES

## Product Overview

### Reliable Marine Power Generation

This marine alternator is engineered to provide efficient and stable electrical power for a wide range of onboard systems, ensuring optimal performance and safety at sea. With a power range spanning from 10 to 2000 KVA, it accommodates various vessel sizes and power demands while withstanding harsh marine conditions. Its advanced design incorporates high-quality materials to deliver long-lasting performance and minimal maintenance requirements.

## Performance & Technical

### Power Output Range

**10 KVA**

Minimum

**2000 KVA**

Maximum

### Certifications

CCS Certified

## Design & Durability

### Key Design Features

- Corrosion resistance
- Vibration resistance
- Temperature fluctuation tolerance
- Advanced cooling system
- Precision voltage regulation

## Applications

Suitable For

Ships, Yachts, Offshore Platforms
