

Marine Construction Elevator Crane

This is a heavy-duty elevator crane system for marine construction. It is designed for lifting and transferring materials from barges to docks or other marine vessels.

Overview

Heavy-Duty Marine Construction Elevator

This robust elevator crane system is engineered specifically for demanding marine construction and material handling environments. Featuring a heavy-duty frame and high-performance hydraulic grabber, it is optimized for the efficient transfer of sediment and construction materials between barges, docks, and marine vessels. Its durable construction ensures reliable operation in challenging maritime conditions.

Technical Specifications

Key Components

- Hydraulic Grabber
- Support Cable System
- Reinforced Heavy-Duty Frame

Operational Status

Heavy-Duty • In-Operation Ready

Primary Application

Marine Construction, Material Handling, Barge Loading, Sediment Transfer
