

Marine Engine Piston

This piston is designed for marine engine applications, ensuring optimal engine performance. It features robust construction for reliable operation in demanding marine environments and is suitable for various ship and peripheral equipment.

Product Overview

Precision Marine Engine Piston

This high-performance piston is engineered specifically for demanding marine engine applications. Designed for optimal engine efficiency and durability, it features a precision-machined crown and optimized ring grooves to ensure reliable performance under extreme conditions. The robust construction is built to withstand rigorous maritime environments, providing an extended service life for both commercial and recreational marine vessels.

Technical Specifications

Serial and Identification Codes

- DL204
- 2245
- 115 III
- MC-HT
- 61772
- 15.12
- H.580
- 15.7.11

Engine Compatibility

YANMAR

Design Features

Design Highlights

Precision-Machined Crown • Optimized Ring Grooves • Robust Construction • Enhanced Combustion Design
