

# Marine Engine Tachometer 0-1200 RPM

Analogue tachometer monitors the rotational speed of marine engines. It features a circular dial displaying speed in revolutions per minute (RPM) up to 1200.

## Product Overview

### Marine Engine Tachometer

This analogue tachometer is specifically engineered for monitoring the rotational speed of main engines in demanding marine environments. Featuring a clear, high-contrast display, it provides real-time RPM feedback to ensure optimal engine performance and operational safety. The unit is built with a robust enclosure and includes mounting brackets, making it suitable for secure installation in engine control rooms or bridge consoles.

## Technical Specifications

### Measurement Range

**1200 RPM**

Max Speed

**0 RPM**

Min Speed

Display Type

Analogue

Critical Range Indication

Yes

## Design & Build

Mounting

Panel mount with brackets

Design Features

Circular Dial, High-Contrast Markings, Robust Enclosure
