

Marine Forged Flange

This marine forged flange is certified by a classification society. It is designed for critical applications in shipbuilding and offshore structures.

Product Overview

Marine Forged Flange Overview

This large-diameter marine forged flange is engineered for critical applications within shipbuilding and offshore structures. Constructed from high-strength alloy steel, the component offers exceptional durability and superior corrosion resistance in demanding marine environments. Designed with precision-machined surfaces, it ensures optimal sealing performance and secure connections for piping systems and pressure vessels.

Technical Dimensions

Outer Diameter Range

700 mm

Min Diameter

9000 mm

Max Diameter

Maximum Weight	40 tons
Maximum Thickness	800 mm
Maximum Height	1500 mm
