Overview

Marine Hydraulic Telescopic Crane

This marine hydraulic telescopic crane is designed for general cargo handling and service operations onboard ships and offshore units. It features a welded, high-strength box boom design for low maintenance and is a self-contained unit with an integrated hydraulic power pack. Built for reliability in harsh sea states, these cranes offer efficient performance with fail-safe brakes and variable speed hoisting.

Technical Features

Key Features

- Welded and high-strength box boom
- Self-contained unit with integrated hydraulic power pack
- Fail-safe brakes on all movements
- Fully enclosed drivers cabin with integrated heating
- Dual pump system with separate hydraulic circuits
- Variable speed hoist with automatic load adjustment

Certifications
