

Marine Hydrophore Water Pressure System

This hydrophore provides a reliable fresh water supply for the living and cleaning needs on ships. It is also suitable for use on offshore drilling platforms.

Overview

Marine Hydrophore Water Pressure System

The Marine Hydrophore Water Pressure System is engineered to deliver a reliable supply of fresh water for essential living and cleaning operations. Designed specifically for the maritime environment, it is suitable for use on commercial ships and offshore drilling platforms. This robust pressure vessel maintains consistent water pressure throughout the onboard plumbing system, ensuring operational stability and comfort for the crew.

Technical Specifications

Configuration Options

- Vertical configuration
- Horizontal configuration

System Features

Robust Construction • Integrated Pressure Monitoring • Multiple Connection Ports • Durable Marine Finish

Applications

Marine Vessels, Drilling Platforms, Fresh Water Supply
