

Marine Mushroom Ventilator

This mushroom ventilator is designed for exposed natural ventilation on ships, adhering to CB/T295-2000 standards. It is easy to operate, widely used, and provides weather-tight performance for various domestic and foreign ships.

Overview

Marine Mushroom Ventilator

Designed in strict accordance with CB/T295-2000 standards, this marine mushroom ventilator provides essential natural ventilation for exposed areas on all types of vessels. The unit is engineered for reliable performance in harsh marine environments, effectively facilitating airflow while preventing water ingress. Its user-friendly design and robust weather-tight construction make it a widely trusted solution for both domestic and international maritime applications.

Technical Standards

Standard Compliance	CB/T295-2000
Application Scope	Exposed Natural Ventilation, Marine Vessels, Peripheral Equipment

Key Features

Operational Features

- Easy to operate
- Weather-tight construction
- Corrosion-resistant materials
- Manual valve control

Primary Benefits

Water Ingress Prevention • Moisture Control • Air Quality Maintenance
