

Marine Outboard Engine

This outboard engine is designed for marine propulsion. It features robust construction for durability and is engineered for optimal fuel efficiency and smooth operation.

Overview

High-Performance Marine Propulsion

This outboard engine is engineered for reliable performance in demanding marine environments. Designed with a robust construction and advanced fuel injection systems, it delivers optimal power output and fuel efficiency. The streamlined design reduces drag, making it an excellent choice for fishing boats, speed boats, and various recreational vessels.

Performance

Rated Power

90 HP

Technical Features

Key Technical Features

- Robust engine block construction
- Advanced fuel injection system
- Efficient cooling system
- Multi-cylinder configuration
- Streamlined drag-reduction design

Maintenance

Maintenance Profile

Designed for easy installation, routine maintenance, and user-friendly servicing.
