

Marine Power Generator

This marine generator is designed for reliable power generation in marine environments. It features a robust construction and is engineered to withstand the harsh conditions of marine applications.

Overview

Reliable Marine Power Solutions

This marine power generator is engineered for consistent and reliable electricity generation in demanding maritime environments. Featuring a direct injection diesel engine and a brushless rotating field generator with class H insulation, it ensures high efficiency and longevity. The unit is designed for versatile installation, offering both manual and automatic starting capabilities to suit various marine vessel needs.

Technical Specifications

Engine Type	Direct injection diesel
Insulation Class	Class H
Generator Type	Brushless rotating field

Features

Key Features

Digital Controller • Fuel Efficient • Silent Type • Vibration Isolated

Starting Modes	Manual, Automatic
----------------	-------------------

Environmental & Safety

Enclosure Rating	NEMA 3R
Suitability	Outdoor use
Vibration Control	Yes
